

João Palma

Junior Full Stack Developer

In the past few years, I have been working in E-commerce and Online sales in the tourism and hospitality sector. During this time, I have gained valuable experience in developing strategies to increase online sales, managing e-commerce platforms, and creating engaging online content.

I am currently in the process of transitioning my career to become a full stack developer. I am skilled in Java, HTML, CSS, JavaScript, SQL and others. I have also learned about software development methodologies, agile project management, and how to collaborate with a team of developers.

Projects

Hangman Game

Text-based game to be played on a terminal. It is based on the classic hangman game where players have to guess a secret word by guessing individual letters. Players can choose to play either single-player mode or multiplayer mode.

Sakura Game

Collab project. 2D platformer game made in java with simpleGFX. Sakura's game world is vibrant and colorful, with detailed backgrounds and character made by our team designers. The game's soundtrack is also a highlight, with upbeat and catchy tunes that enhance the gameplay experience.
